Low Profile Load Cell

# PC3 Series

**The PC3 Series is a high performance, low profile, strain gage load cell constructed of high strength stainless steel. The PC3 Series is designed to accurately measure tension and compression forces ranging from 0-50 LB to 0-10,000 LB.**

The PC3 Series is a miniature universal in-line high performance load cell constructed of heat treated stainless steel. The PC3 is designed to accurately measure tension and compression forces in capacities ranging from 0-50 LB to 0-10,000 LB. The diaphragm and column sensing designs, coupled with an enhanced strain gage arrangement, produces excellent performance in a very small, compact package. The inherent low deflection of the PC3 Series yields a high dynamic response and superior output resolution for a wide range of applications. This load cell is Harsh Environment Sealed (IP67-Limited Immersion) by virtue of proprietary multi-redundant barriers uniquely integrated to protect all internal components. The integral premium instrumentation grade cable features a durable Teflon® jacket over a tinned-copper braided shield for superior mechanical protection and for minimizing the unwanted electrical effects of RFI and EMI. The attributes of the PC3 Series make it ideal for measurements in the laboratory, structural testing, materials testing, and general force measurements where a miniature male to male in-line precision load cell solution is required.

## APPLICATIONS

- Tension/Compression Measurements
- Laboratory Test & Measurement
- Materials Testing
- Dynamic Measurements
- Structural Analysis
- Process Control
- Automotive
- Aerospace

## FEATURES

- 50 LB to 10K LB Capacities
- 0.15% Accuracy Class
- 2 mV/V Full Scale Output
- 5 FT Teflon Cable
- Miniature Male to Male In-Line Configuration
- IP67 Environmental Sealing
- Stainless Steel Construction
- Enhanced Diaphragm and Column Designs
- Universal - Tension and Compression

# PC3 Series Specifications

## PERFORMANCE

Rated capacities <sup>(1)</sup> (LB)	50, 100, 250, 500, 1K, 2K, 3K, 4K, 5K, 7.5K, 10K
Rated Output (FSO)	2 mV/V
Output Tolerance	Nominal
Combined Error Band	≤ 0.15 % FSO
Non-Linearity	≤ 0.15 % FSO
Hysteresis	≤ 0.15 % FSO
Non-Repeatability	≤ 0.05 % of load
Zero balance	± 2.0 % FSO
Creep (30 Minutes)	0.05% of Load

<sup>(1)</sup> ("K" = thousand)

## MECHANICAL

Material	Stainless steel
Finish	Natural
Safe overload	Compression 150 % FSO
	Tension 150 % FSO
	Side Load 2 % FSO
Ultimate overload	Compression 250% FSO
	Tension 250% FSO
	Side Load 5 % FSO
Deflection	See Dimensions Page
Weight	See Dimensions Page

## ELECTRICAL

Input Impedance	375 ohms (nominal)	
Output Impedance	350 ohms (nominal)	
Insulation Resistance	>5000 Megohms @ 50VDC	
Excitation Voltage	10 V AC/DC (15 V maximum)	
Cable Color Code	+ Excitation (Red)	
	- Excitation (Black)	
	+ Signal (Green)	
	- Signal (White)	
	Shield (Natural)	
Cable Type	4-conductor, Teflon® Jacket, Tinned Copper Braid, 50 to 5K LB: 0.090" DIA, 30 AWG 7.5K to 10K LB: 0.142" DIA, 26 AWG	
	Cable Length	See Dimensions Table
	Cable Termination	Finished Conductors
Cable Seal	Epoxy Gland/Strain Relief	

## ENVIRONMENTAL

Temperature, Operating	-65 to +250 °F (-54 to +120°C)
Temperature, Compensated	15 to +115 °F (-9 to +46°C)
Temperature, Storage	-65 to +300 °F (-54 to +149°C)
Temperature Effects	Zero < 0.005% FSO/°F
	< 0.009% FSO/°C
Temperature Effects	Output < 0.005% of Rdg./°F
	< 0.009% Rdg./°C
Sealing	IP67; Multi-redundant; Limited Immersion Tolerance

## Application Recommendations / Suggestions

- The PC Series Compact Low Profile Load Cells are considered to be “universal” in that they are designed to be loaded in compression and/or tension.
- The PC Series Load Cells are ideal for single or multiple load cell measurements typical of test and measurement, weighing, dynamic measurements, load testing systems and similar applications. When used in multiples, it is recommended that matched outputs be specified for optimum performance. Multiple load cell systems should include a Sentran summing/junction box to correctly multiplex the load cell excitation and measurement signals.
- The PC Series Load Cells feature integral mounting studs on each end of the load cell. These load cells may be used in virtually any orientation.
- Load is applied to the load Cell through the threaded studs extending axially from the load cell body. All the threads of the studs should be engaged by the loading member(s), but the loading members should not engage the load cell body.
- The most common loading method is to apply a force axially via the integral threaded studs. Load introduction is best accomplished using devices such as rod end bearings, flexures, or similar loading interfaces providing flexibility for decoupling of off-axis and side loads.
- Off-axis loads and shock loading should be avoided as degraded performance and/or damage to the load cell could occur.
- PC Series Low Profile Load Cells are available in many capacity ranges. These load cells are designed to be used over the complete range of “no load” (0) up to the rated capacity. For example, 1,000 lbs. rated capacity PC Series are designed to be used for measurements within the range of 0 to 1,000 lbs. These load cells can be safely loaded to 150% of rated capacity without affecting the load cell performance within the capacity range.
- The reason for the variety of capacities is to allow the user to select the most ideal capacity for a given application. The most ideal capacity is one in which at least 80% of the capacity range is utilized at some point in the measurement process, without exceeding the rated capacity. This allows the load cell to deliver the highest signal to load ratio, and therefore the highest resolution and most stable measurement. There are other factors to consider, such as excitation voltage, but correct “sizing” of the load cell is the first step. Both the dead load and the live load need to be considered in determining the gross load and the load cell capacity.
- Contact Sentran’s expert Applications Specialists for additional professional guidance.

## Commercial Information & Precautions

### WARNING!

- Do not exceed specified Maximum Load Limits.
- The Safe Load Limit is the point to which normal loading will not cause the load cell to experience an excessive zero shift or a degradation in performance.
- Use reasonable care when applying load to any load cell. Load limits can be exceeded due to shock loading (i.e. dropping a load onto a load cell), off axis loading, side loading and similar loading conditions that are beyond design capabilities.
- The structural integrity of all load bearing components in any load cell system should be designed with safety redundant load paths. (Overload stops, overhead load arrestors, etc.)
- The surfaces to which the load cell(s) is attached and/or is reacting against must be of sufficient structural integrity to carry loads up to and exceeding the ultimate ratings of the load cell(s) being used, while also taking into account any companion hardware being used in conjunction with the load cell.
- To ensure optimum performance, all measuring system cabling should be run through dedicated conduit when available. Avoid proximity to electrical noise sources and use of "dirty" power sources.
- The load cell cable shield should be connected to a dedicated instrument ground point only.
- Force measurement and weighing applications have numerous application-specific considerations to be addressed both mechanically and electrically. Therefore, installation of all system components are the responsibility of the user and should always be approved by a qualified, professional engineer. Any information provided by Sentran, LLC is intended only as informational and does not constitute a formal recommendation for the use of any product for any application.
- Sentran offers application/installation/use guides on request for most standard products. Please contact your Sentran representative for assistance, or visit our technical library resource at [www.sentranllc.com](http://www.sentranllc.com).

### PERSONAL INJURY!

**DO NOT USE these products as safety or emergency stop devices or in any other application where failure of the product could result in personal injury.**

### MISUSE OF DOCUMENTATION

- The information presented in this datasheet is for reference only. DO NOT USE this document as product installation information.
- Complete installation, operation and maintenance information is provided in the instructions supplied with each product.

**Failure to comply with these instructions could result in death or serious injury.**
